1. The levellised generic tariffs for Small Hydro Projects, Biomass Power Projects with Rankine Cycle Technology, Non-fossil Fuel-based Co-generation Projects, Biomass Gasifier based Power Projects and Biogas based Power Projects, for FY 2021-22 are discussed in following paragraphs.
2. For RE projects covered under Regulation 7 of the RE Tariff Regulations, the Commission is required to determine project specific tariff. A separate petition is required to be filed by the person seeking tariff for determination of project specific tariff as per Regulation 8 of RE Tariff Regulations.

A. Useful Life

3. The clause (hh) of sub-Regulation (1) of Regulation 2 of the RE Tariff Regulations defines 'useful life' in relation to project, including dedicated evacuation system, from the date of commercial operation (COD) of such project, as under:

Renewable Energy Projects	Years
Small HydroProjects	40
Biomass power project with Rankine Cycle technology	25
Non-fossil Fuel-based Co-generation Projects	25
Biomass Gasifierbased Power Projects	25
Biogasbased Power Projects	25

B. Control Period

4. Regulation 5 of the RE Tariff Regulations specifies that the Control Period for determination of tariff for renewable energy projects (RE projects) shall be from 01.07.2020 to 31.03.2023. The proviso to this Regulation specifies that the tariff determined for the RE projects commissioned during the control period, shall remain valid for the tariff period (Useful life of the project). Accordingly, the tariff determined by the Commission vide order 13/SM/2020

dated 21st July 2020, is applicable for RE projects commissioned during first year of the control period. The tariff to be determined via this order is for the second year of the control period, which shall be applicable for the Projects commissioned during the period from April 1, 2021 till March 31, 2022.

C. Tariff Structure

5. Regulation 9 of the RE Regulations stipulates that the tariff for renewable energy sources shall consist of the following components:

- a. Return on equity;
- b. Interest on loan capital;
- c. Depreciation;
- d. Interest on working capital; and
- e. Operation and Maintenance expenses

6. For renewable energy technologies having fuel cost component, like biomass power projects with rankine cycle technology, non-fossil fuel based cogeneration projects, biomass gasifier based power projects and biogas based power projects, single part tariff with two components i.e. fixed cost component and fuel cost component, is to be determined.

D. Tariff Design

7. In terms of Regulation 10 of the RE Tariff Regulations, the tariff design for renewable energy generating stations is as under:

“(1) The generic tariff shall be determined, on levellised basis, considering the year of commissioning of the project, for the tariff period of the project: Provided that for renewable energy projects having single part tariff with two components, fixed cost component shall be determined on levellised basis considering the year of commissioning of the project while fuel cost component shall be determined on year of operation basis in the Tariff Order to be issued by the Commission.”

E. Levellised Tariff

8. Levellised Tariff is to be calculated by carrying out levellisation for 'useful life' of each technology considering the discount factor.

F. Discount Factor

9. Regulation 10(2) of the RE Tariff Regulations specifies methodology to calculate discount factor for the purpose of levellised tariff computation as under:

“10. Tariff Design

....
(2) For the purpose of levellised tariff computation, discount factor equivalent to post-tax weighted average cost of capital shall be considered.”

10. Accordingly, the discount factor considered for this exercise is equal to the post tax weighted average cost of capital on the basis of normative debt-equity ratio (70:30). Considering the normative debt equity ratio and weighted average of the post-tax rates for debt and equity component, the discount factor is calculated.

11. Interest Rate considered for the loan component (i.e., 70% of capital cost) is 9%. For equity component (i.e., 30% of capital cost), the rate of Return on Equity (ROE) is considered at post-tax rate of 14%. Further, Corporate Tax rate has been considered as 34.94%¹. Accordingly, the discount factor derived by this method for all technologies is 8.30%.

(Discount Factor = [{(9% x 0.70) x (1 – 34.94%)} + (14.0% x 0.30)] = 8.30%)

G. Capital Cost

12. Regulation 12 of the RE Tariff Regulations specifies as under:

“12. Capital Cost

Norms for capital cost, as specified in relevant chapters of these regulations, shall be inclusive of land cost, pre-development expenses, all capital work including plant & machinery, civil work, erection, commissioning, financing cost, interest during construction, and evacuation infrastructure up to interconnection point.”

13. The Commission has considered the normative capital cost as specified in the RE Tariff Regulations, applicable for the second year of control

¹Income Tax rate of 30% + 12%surcharge on IT rate +4% Health and Education cess on IT rate and Surcharge

R. Subsidy or Incentives by State/Central Government

53. Regulation 22(1) of the RE Tariff Regulations provides as under:

"The Commission shall take into consideration any incentive, grant or subsidy from the Central or State Government, including accelerated depreciation benefit if availed by the project while determining the tariff under these Regulations.

Provided that the following principles shall be considered for ascertaining income tax benefit on account of accelerated depreciation, if availed, for the purpose of tariff determination:"

- "1) Assessment of benefit shall be based on normative capital cost, accelerated depreciation rate and corporate income tax rate as per relevant provisions under Income Tax Act as amended from time to time*
- 2) Capitalization of Renewable energy projects during second half of the fiscal year*
- 3) Per unit benefit shall be derived on levellised basis at discount factor equivalent to weighted average cost of capital"*

54. Capital subsidy provided by the Government as per prevailing scheme/policy has already been considered, while considering the capital cost of the project.

55. In terms of the above regulation, for the projects availing the benefit of accelerated depreciation, applicable Corporate Tax rate of 34.94% has been considered. For the purpose of determining net depreciation benefits, depreciation @5.28% as per straight line method (Book depreciation as per Companies Act, 1956) has been compared with depreciation as per Income Tax Act, 1961 i.e. 40% of the written down value method. Moreover, additional 20% depreciation in the initial year is proposed to be extended to new assets acquired by power generation companies vide amendment in the section 32, sub-section (1) clause (iia) of the Income Tax Act, 1961.

56. Depreciation for the first year has been calculated at the rate of 50% of accelerated depreciation (40%) and 50% of additional depreciation (20%) (as project is capitalized during the second half of the financial year as per proviso to sub-regulation 1 of Regulation 22). Income tax benefits of accelerated depreciation and additional depreciation, have been worked out as per normal tax rate on the net depreciation benefit. Per unit levellised accelerated depreciation benefit has been computed considering the post-tax weighted average cost of capital as discount factor. Accelerated depreciation benefit has been computed as per existing provisions of the Income Tax Act, 1961.
